Lenovo's lineup looks confusing because it genuinely has gotten more complicated since you last checked: there's a new ThinkPad line that didn't exist a year ago, IdeaPad renamed almost everything, and a whole budget-gaming brand launched

from scratch. Here's the short version. **ThinkPad** is the business line (ultraportable X-series, workhorse T-series, mobile workstation P-series, budget E/L-series).

ThinkBook is Lenovo's smaller-business line, styled more like a consumer laptop.

Yoga is premium consumer, mostly 2-in-1s and thin-and-lights. **IdeaPad** is mainstream consumer, now organized under "Slim" and "Flex" naming. **Legion** is the gaming flagship, and **LOQ** (launched in 2023) is the budget-gaming line underneath it. This guide decodes every current sub-model, what got discontinued, and which one you should actually buy.

Lenovo laptop series at a glance

Series	Who it's for	Typical price band
ThinkPad	Business, IT-managed fleets, professionals who want durability	\$900 – \$3,500+
ThinkBook	Small business, freelancers, modern professionals	\$700 – \$1,800
Yoga	Premium consumer, creators, 2-in-1 users	\$1,000 – \$2,200
IdeaPad (Slim / Flex)	Mainstream home, school, everyday use	\$350 – \$1,200
Legion	Serious/enthusiast gaming	\$1,300 – \$4,000+
LOQ	Budget gaming	\$700 – \$1,300
Chromebook (Duet / IdeaPad)	Light browsing, students, secondary device	\$250 – \$500

Lenovo ThinkPad — the business line

ThinkPad is Lenovo's oldest and most recognizable brand, inherited from IBM in 2005. It's still organized around form factor rather than one flat naming scheme, so here's how the current stack breaks down.

ThinkPad X9 is new for 2026 and worth understanding on its own, because it's not a straightforward replacement for anything. Announced at CES 2026, the X9 is a premium 14" and 15" line built under Lenovo and Intel's joint **Aura Edition** program (more on what that means below). The 15" X9 15p starts around \$1,999, weighs about 1.5 kg, and pairs a 15.3" OLED display with Intel's newest Core Ultra X9 chips — Lenovo is positioning it to compete directly with the MacBook Pro and other premium creator laptops, sitting above the traditional X1 line on specs and price rather than replacing it outright.

ThinkPad X1 Carbon remains the flagship ultraportable, now at **Gen 13** (Aura Edition), a roughly 1kg carbon-fiber-and-magnesium 14" business laptop with a 2880×1800 display and Intel Core Ultra silicon ([check price on Amazon](#)). The X1 line also historically included the X1 Yoga (convertible) and the foldable **X1 Fold** — Lenovo has since discontinued the X1 Fold and X1 Fold 16, so the foldable ThinkPad concept is currently on ice, not a live purchase option.

ThinkPad T-series is the durability-focused workhorse line and just got a refresh: **T14 Gen 7** and **T16 Gen 5** start around \$1,799, while the slimmer **T14s Gen 7** (about 2.45 lb, the lightest T-series ever) starts around \$1,899. All run Intel Core Ultra Series 3 or AMD Ryzen AI Pro 400-series chips, with a **T14s 2-in-1 Gen 2** convertible variant too.

ThinkPad P-series covers mobile workstations for CAD, 3D, and data science: **P14s** and **P16s** (thin-and-light workstations) and the flagship **P1**, now at **Gen 9**, pairing

Intel Core Ultra or AMD Ryzen AI Pro chips with NVIDIA RTX PRO Blackwell-generation laptop GPUs.

ThinkPad L-series and E-series remain Lenovo's value business tiers — L-series for cost-conscious productivity, E-series as the entry point into ThinkPad ownership.

What's gone since our last update: the **ThinkPad 11e** (budget/education line) and the **ThinkPad A-series** (the old AMD-branded tier) have both been discontinued as standalone lines — AMD options now live inside the regular T- and P-series instead of a separate "A" badge.

Lenovo ThinkBook — small-business and modern professional

ThinkBook sits a notch below ThinkPad: same commercial-grade security and manageability features, but styled and priced more like a consumer laptop, aimed at small businesses and professionals who don't need full ThinkPad ruggedness. The current lineup includes the standard **ThinkBook 14** and **ThinkBook 16**, the higher-spec **ThinkBook 14+/16+** (AMD Ryzen AI silicon, up to 3.2K 165Hz displays, and support for an external GPU dock), and the unusual **ThinkBook Plus Gen 7 Auto Twist**, a rotating-display model shown at CES 2026. Think of ThinkBook as "ThinkPad security and build quality, IdeaPad-like styling and pricing."

Lenovo Yoga — premium consumer

Yoga is Lenovo's premium consumer line, built around thin-and-light design and (in most models) 2-in-1 flexibility. It splits into two families:

- **Yoga Slim** — thin-and-light clamshells. The **Yoga Slim 7i** is Lenovo's current ultralight flagship, around 1kg with premium Intel silicon.
- **Yoga Pro** — the higher-power convertible/creator tier, replacing what used to be called "Yoga 9i." The **Yoga Pro 9i** (Gen 9/10 depending on refresh cycle) targets creators and gamers with up to an RTX 5070 and a 3.2K OLED display around \$1,900; the **Yoga Pro 7i** sits just below it.

Lenovo also still sells 360-degree convertible 2-in-1s under the plain **Yoga 9i** name. Some past coverage of a dual-screen "Yoga Book 9i" exists, but it isn't a consistent current-catalog item in the US store — treat any dual-screen Yoga you see as a limited or discontinued configuration rather than a mainstream buy.

Lenovo IdeaPad — mainstream consumer

IdeaPad went through the biggest naming overhaul of any Lenovo line. The old alphabet soup (S-series, C-series, L-series, Creator-series) is gone, replaced by a much simpler two-family structure:

- **IdeaPad Slim** — standard clamshells, the mainstream default. **IdeaPad Slim 3** is the everyday/budget tier; **IdeaPad Slim 5** and up move to sharper displays and better build ([check price on Amazon](#)). 2026 models have shifted several sizes to a taller 16:10, 15.3" panel and Intel's newer Panther Lake chips.
- **IdeaPad Flex** — 2-in-1 convertibles with a touchscreen and 360° hinge, replacing the old IdeaPad C-series and Yoga-adjacent budget convertibles.

Lenovo also uses **IdeaPad Pro** for a step-up tier with better displays and performance, positioned between Slim and Yoga. The old **IdeaPad Duet** detachable name has moved almost entirely into the Chromebook lineup (see below), rather than staying a Windows IdeaPad product.

Lenovo Legion — gaming

Legion is Lenovo's flagship gaming line, and the 2025–26 refresh brought a full chassis redesign across the top tiers.

- **Legion Pro 7i / Pro 5i** — the highest-end tier, Intel Core Ultra 9 (Arrow Lake-HX) paired with up to an RTX 5090 laptop GPU, OLED displays up to 240Hz, and up to 64GB of memory.
- **Legion 7i / Legion 5i** — the mainstream-premium and mid-range tiers.
- New for 2026: AMD-powered variants now carry an **"a" suffix** (Legion 7a, Legion 5a) while Intel models keep the **"i" suffix**, so you can tell the chip vendor from the name alone.
- **Legion Slim** models trade some thickness and cooling headroom for portability within the same performance tier.
- **Legion Go 2** — Lenovo's gaming handheld, now offered in both Windows and a SteamOS variant (from about \$1,199), worth a mention here even though it's not a traditional laptop.

Lenovo LOQ — budget gaming (new since 2021)

LOQ didn't exist when this article was last written — Lenovo launched it in 2023 as a standalone budget-gaming brand, positioned below Legion. The 2026 LOQ lineup runs Intel Panther Lake or AMD Ryzen 7 250 chips with RTX 40-series (and increasingly RTX 5060-class) GPUs, 15.3" 165–180Hz IPS displays, and a lighter chassis than earlier LOQ generations. Typical pricing runs roughly \$700–\$1,300 — this is where most people looking for "a gaming laptop that isn't \$2,000" should be shopping ([check price on Amazon](#)).

For context on where LOQ fits against other budget options, see our [best gaming laptops under \\$800](#) guide.

Lenovo Chromebooks

Lenovo's Chromebook lineup runs separately from its Windows naming. The **IdeaPad Chromebook Duet** (a detachable 2-in-1, now largely the home for the "Duet" name) and various **IdeaPad Slim Chromebook** models cover the low end, typically \$250–\$500, aimed at students and light browsing rather than heavy multitasking.

Lenovo naming decoder

- **Series name = category.** ThinkPad (business), ThinkBook (small business), Yoga (premium consumer), IdeaPad (mainstream consumer), Legion (gaming), LOQ (budget gaming).

- **Numbers = size and/or tier.** On ThinkPad, the number after the letter is usually screen size (T14 = 14", T16 = 16"). On Legion and IdeaPad, higher numbers (Legion 7 vs Legion 5, IdeaPad Slim 5 vs Slim 3) mean a higher tier.
- **"Gen #" = generation.** ThinkPad X1 Carbon Gen 13, ThinkPad P1 Gen 9, Legion Pro 7i Gen 10 — always check the generation number before comparing specs, since Lenovo keeps a model name alive across many hardware refreshes.
- **"i" vs "a" suffix = chip vendor**, at least on current Legion and Yoga models: "i" is Intel, "a" is AMD.
- **"Pro" and "Slim" are tier/form-factor modifiers**, not separate series — Yoga Pro is the higher-power Yoga, IdeaPad Slim is the standard clamshell IdeaPad, Legion Slim trims thickness from the standard Legion chassis.
- **"Aura Edition"** marks Lenovo's joint AI PC program with Intel (launched September 2024): co-engineered hardware (including tuned high-speed LPDDR5x memory) plus a bundle of Lenovo AI features — Shield Mode, Attention Mode, Collaboration Mode, Power Mode, and Wellness Mode. It's a platform label that can appear across ThinkPad, Yoga, and IdeaPad Intel models, not a separate product line.

Old Lenovo series and what replaced them

If you remember...

It's now...

IdeaPad S-series

IdeaPad Slim (entry/mid tiers)

IdeaPad C-series

IdeaPad Flex (2-in-1 convertibles)

IdeaPad L-series

Folded into IdeaPad Slim

If you remember...	It's now...
IdeaPad Creator-series	Discontinued as a separate badge; creator-focused specs now live in Yoga Pro and higher IdeaPad Slim configs
IdeaPad Duet (Windows)	Moved almost entirely to Chromebook (IdeaPad Chromebook Duet)
ThinkPad A-series (AMD)	AMD options folded into standard T- and P-series
ThinkPad 11e	Discontinued
ThinkPad X1 Fold	Discontinued (no current foldable ThinkPad on sale)
Legion Y-series	Legion 5 / Legion 7 numbered tiers
No LOQ equivalent (didn't exist)	LOQ, launched 2023, as the budget-gaming tier below Legion

Which Lenovo series should you buy?

- **Student on a tight budget:** IdeaPad Slim 3, or an IdeaPad Chromebook Duet if you mainly need a browser machine.
- **General home user:** IdeaPad Slim 5, or IdeaPad Flex if you want a touchscreen 2-in-1.
- **Small-business owner or freelancer:** ThinkBook 14, or ThinkBook 14+ if you want a sharper display and more power.
- **Corporate/enterprise buyer, IT-managed fleet:** ThinkPad T14 or T14s for standard issue; ThinkPad X1 Carbon or the new X9 for executives who want the best.

- **CAD, 3D, or data-science professional:** ThinkPad P14s up to the P1 for serious GPU-accelerated workloads.
- **Creator who wants a premium 2-in-1:** Yoga Pro 9i or Yoga Slim 7i.
- **Gamer on a budget:** LOQ.
- **Gamer who wants real power:** Legion 5i/5a for mid-range, Legion Pro 7i for the top tier. If you're comparing RAM headroom for gaming or creative work, our [best 32GB RAM laptops](#) roundup is a useful companion.

Frequently asked questions

What is the latest Lenovo laptop model?

There's no single "latest" — Lenovo refreshes each series on its own cycle. As of mid-2026, the newest headline releases are the ThinkPad X9 (launched CES 2026), the ThinkPad X1 Carbon Gen 13, the T14/T14s/T16 Gen 7/5 refresh, and the redesigned Legion Pro 7i Gen 10.

Is ThinkPad better than IdeaPad?

They're built for different jobs, not a strict better/worse. ThinkPad prioritizes durability, security features, and IT manageability, and costs more for it. IdeaPad prioritizes value — you get solid everyday performance at a lower price, without the business-grade extras most home users don't need.

What does Aura Edition mean?

It's Lenovo's joint program with Intel, launched in September 2024, that co-engineers the hardware (like stable high-speed memory) and bundles a set of on-

device AI features (Shield Mode, Attention Mode, Collaboration Mode, Power Mode, Wellness Mode). It's a platform label, not its own product line — you'll see it attached to ThinkPad, Yoga, and IdeaPad models with Intel chips.

Is Lenovo a good brand?

Yes, broadly — Lenovo has been the world's largest PC maker by shipments every year since 2013, and led again in 2025 with roughly a quarter of global market share. Quality still varies by series and price tier, so match the series to your actual use case rather than assuming the brand name alone guarantees the right laptop.

The final verdict

Lenovo's 2026 lineup is bigger than it looks, but it collapses into six real buckets: ThinkPad for business durability, ThinkBook for smaller-business value, Yoga for premium consumer flexibility, IdeaPad for mainstream everyday use, and Legion/LOQ for gaming at the high end and budget end respectively. The newest wrinkle is the ThinkPad X9 and the broader Aura Edition push — worth knowing about, but not something most buyers need to chase over a well-specced X1 Carbon, T14, or IdeaPad Slim. If you're cross-shopping against the other major brand, see our [HP laptop series guide](#) and our head-to-head [HP vs Lenovo comparison](#).
